23 November 2006

LETTER OF RECOMMENDATION

This letter serves to confirm and certify that our institution has field tested the DRUG DETECTIVE drug detection kit within our environment with excellent results.

The instructions for use with the kit are clear and concise. Practically, the testing process is rapid and easy. Our applications of the DRUG DETECTIVE kit are numerous and range from testing suspected material directly, to testing any obvious surface that may have come into contact with traces of drugs. Patients themselves can be monitored in the rehabilitation process using the kit.

Our field tests of the DRUG DETECTIVE kit have yielded both expected results, and on the odd occasion, unsuspecting results, which have helped this institution in clarifying access points to drugs and identification of drug type usage.

We can recommend the DRUG DETECTIVE kit for usage in any institution or to any concerned parent. This product can save a life by facilitating prevention and control measures, and is now part of our arsenal against drug use.

Yours sincerely,

SANCA OUTPATIENT CLINIC
